Question 021 | Question bank page 3 | Q.1

Develop an ASP.NET Core web application to authenticate users and restrict access to pages based on user roles, such as Admin and User.

Project type: C# Console Application

Steps to perform

1. Open Visual Studio and choose Create a new project.

2. Select Console App (C#), choose a project name and create it.

3. Open Program.cs and replace the sample code with the provided C# code.

4. Build the project; resolve any missing using directives or compilation errors.

5. Press Ctrl+F5, enter the required inputs, and verify the console output.

Source code status: No sufficiently close matching implementation was identified in the two supplied PDFs.

Suggested verification: Create the project, implement the features stated in the question, compile, run and test each required behavior. A complete solution must be authored separately.

Expected result / verification

The application should meet the exact question requirements. Record actual output or screenshots after running; no execution has been claimed in this manual.
