Question 086 | Question bank page 8 | Q.1

Create a simple Registration Form in ASP.NET Web Forms to demonstrate the following Validation Controls: a. RequiredFieldValidator b. RangeValidator c. CompareValidator d. RegularExpressionValidator

Project type: ASP.NET Web Forms (.NET Framework)

Steps to perform

1. Open Visual Studio on Windows and choose Create a new project.

2. Select ASP.NET Web Application (.NET Framework), then Web Forms.

3. Create the .aspx page and its matching .aspx.cs code-behind file.

4. Add the required server controls, event handlers and any XML/image assets.

5. Build the project and press Ctrl+F5; submit the form and verify the displayed result.

Closest supplied practical: } } Create a Registration form to demonstrate use of various Validation controls.

Source: Dot_Net_Practicals_1_to_5_.pdf

Provided creation instructions and source files

```
Creation steps: Create the ASP.NET Web Application named RegistrationForm. Add the listed files at
the locations
below and enter the corresponding code.
Filename: Registration.aspx.cs    Location: Web Forms project root / code-behind
using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.UI;
using System.Web.UI.WebControls;
namespace RegistrationForm
{
    public partial class Registration : System.Web.UI.Page
    {
        protected void Page_Load(object sender, EventArgs e)
        {
        }
        protected void btnSubmit_Click(object sender, EventArgs e)
        {
            if(Page.IsValid)
            {
                lblOutput.Text = "Registration Sucessful";
            }
        }
    }
}
```

CHECK: This is a related source example, not necessarily a complete or exact solution to the wording above. Adapt and verify it.

Expected result / verification

The application should meet the exact question requirements. Record actual output or screenshots after running; no execution has been claimed in this manual.
